

6 trains to shift from Ahmedabad railway station to Sabarmati this week

The Kalupur railway station in Ahmedabad is undergoing redevelopment to achieve world-class status. Another significant redevelopment project is underway at Sabarmati station, including infrastructure upgrades at the Integrated Coaching Depot (ICD) to improve train maintenance facilities. Additionally, stations like Maninagar, Vatva, Chandlodia, and Asarva are being developed as Amrit Stations to enhance capacity and passenger amenities.

Due to these redevelopment efforts, the Railways has announced terminal changes for some trains originating from Ahmedabad. As a result, a few trains' terminals are being relocated to Gandhinagar Capital or Sabarmati stations. This move aims to enhance operational flexibility, reduce congestion at Ahmedabad station, improve passenger services, and expedite infrastructure projects, including the Mumbai-Ahmedabad Bullet Train project.
