

AMC Installs Ahmedabad's First Pelican Signal on Trial at CG Road

The Amdavad Municipal Corporation (AMC) has installed a Pelican (push-button-operated) traffic signal on a trial basis near Municipal Market on C.G. Road, one of the busiest corridors in the city. The aim of the initiative is to prioritize the safety of pedestrians and make the traffic system smoother.

This new signal has currently been handed over to the Ahmedabad City Traffic Police for operation and use by citizens. The implementation of this experimental signal will be closely monitored. If this trial is found to be successful and appropriate, such Pelican signals will also be installed at other busy and high-traffic locations in the city as per the requirements of the Traffic Police.

What is a Pelican signal and how does it work?

A Pelican signal is a button-operated signal system specially designed for pedestrians.

When a citizen wants to cross a busy road, he or she has to press the button installed on the signal pole.
