

Ahmedabad to Get ₹364-Crore Four-Lane ROB-Cum-Elevated Corridor

The Ahmedabad Municipal Corporation (AMC) has started preparations to upgrade the city's infrastructure ahead of the 2030 Commonwealth Games, with a major four-lane bridge-cum-elevated corridor planned on the S.G. Highway. The civic body has floated a tender worth ₹364.44 crore for the construction of a four-lane Railway Over Bridge (ROB)-cum-elevated corridor connecting Sarkhej Circle with the New Ring Road.

The project is aimed at easing traffic congestion and eliminating the need for vehicles to wait at the railway level crossing on the Ahmedabad-Botad railway line. The proposed structure will be around 1.55 km long and will be built along the 60-metre-wide TP Road. It will pass over the Sanand-Sarkhej Road and the Ahmedabad-Botad railway line, allowing traffic to move continuously without being held up at the railway crossing.

According to the tender documents, the project will replace Level Crossing (LC) No. 28 and include a four-lane ROB and elevated corridor to improve connectivity around L.J. Circle and Sanand Junction on the S.G. Highway.
