

Envision Energy inaugurates 2.66 GW wind turbine blade plant in Ahmedabad

Envision Energy has inaugurated its wind turbine generator blade manufacturing plant at Bavla in Ahmedabad, marking a significant addition to Gujarat's renewable energy manufacturing ecosystem.

Spread across 14 acres, the facility has an installed annual manufacturing capacity of 2.66 GW and will produce advanced wind turbine blades measuring up to 100 metres in length. The plant features smart manufacturing technologies and is expected to support India's transition towards clean energy, the company said.

Union Minister for Power Pralhad Joshi, who joined the inauguration virtually, described the facility as an important step towards strengthening Aatmanirbhar Bharat and expanding India's domestic renewable energy manufacturing capabilities.

The blades manufactured at the Gujarat facility are expected to cater to domestic requirements while supporting the growing demand for reliable green power from high-tech sectors, including data centres and semiconductor manufacturing.
